Building Inspector
Washington, NC

To Whom it May Concern,

This letter is to inform you that an inspection was performed at 423 E. Main Street in Washington, NC for footings and piers on the building renovation at this location. The footings and piers were inspected to ensure they were at the proper widths, depths and location including soil conditions. Based on my inspections the 30 footings and piers are approved as installed. The methods utilized will meet all requirements as set forth by 2018 NC State Building Code. I hope that this addresses any issues with the acceptance of the foundation at this location.

I hope that this addresses any issues with acceptance.

If you have any questions concerning this matter please contact me.

Thank you,

Timothy A. Corley
