ADDENDUM

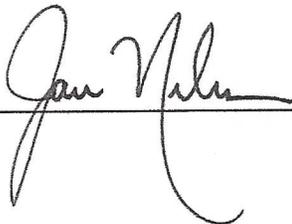

Siding Manufacturer

Extreme weather conditions (drought in Mexico) have disrupted the global supply chain of ASA (Acrylonitrile Styrene Acrylate), a raw material that is crucial for the production of our vinyl siding products.

We are working closely with our suppliers to minimize this situation, but despite our best efforts, the availability of ASA remains currently limited. As a result, we are implementing the following temporary measures to all presales. We will try to use **CertainTeed siding** (the samples in the design room), but if we cannot get the color that you select, Atlantic reserves the right use a different brand and try to match it the best we can.
