TYPICAL ULTRA-SHALLOW DRAIN LINE PLACEMENT
TOP OF ROCK EVEN WITH ORIGINAL SOIL SURFACE

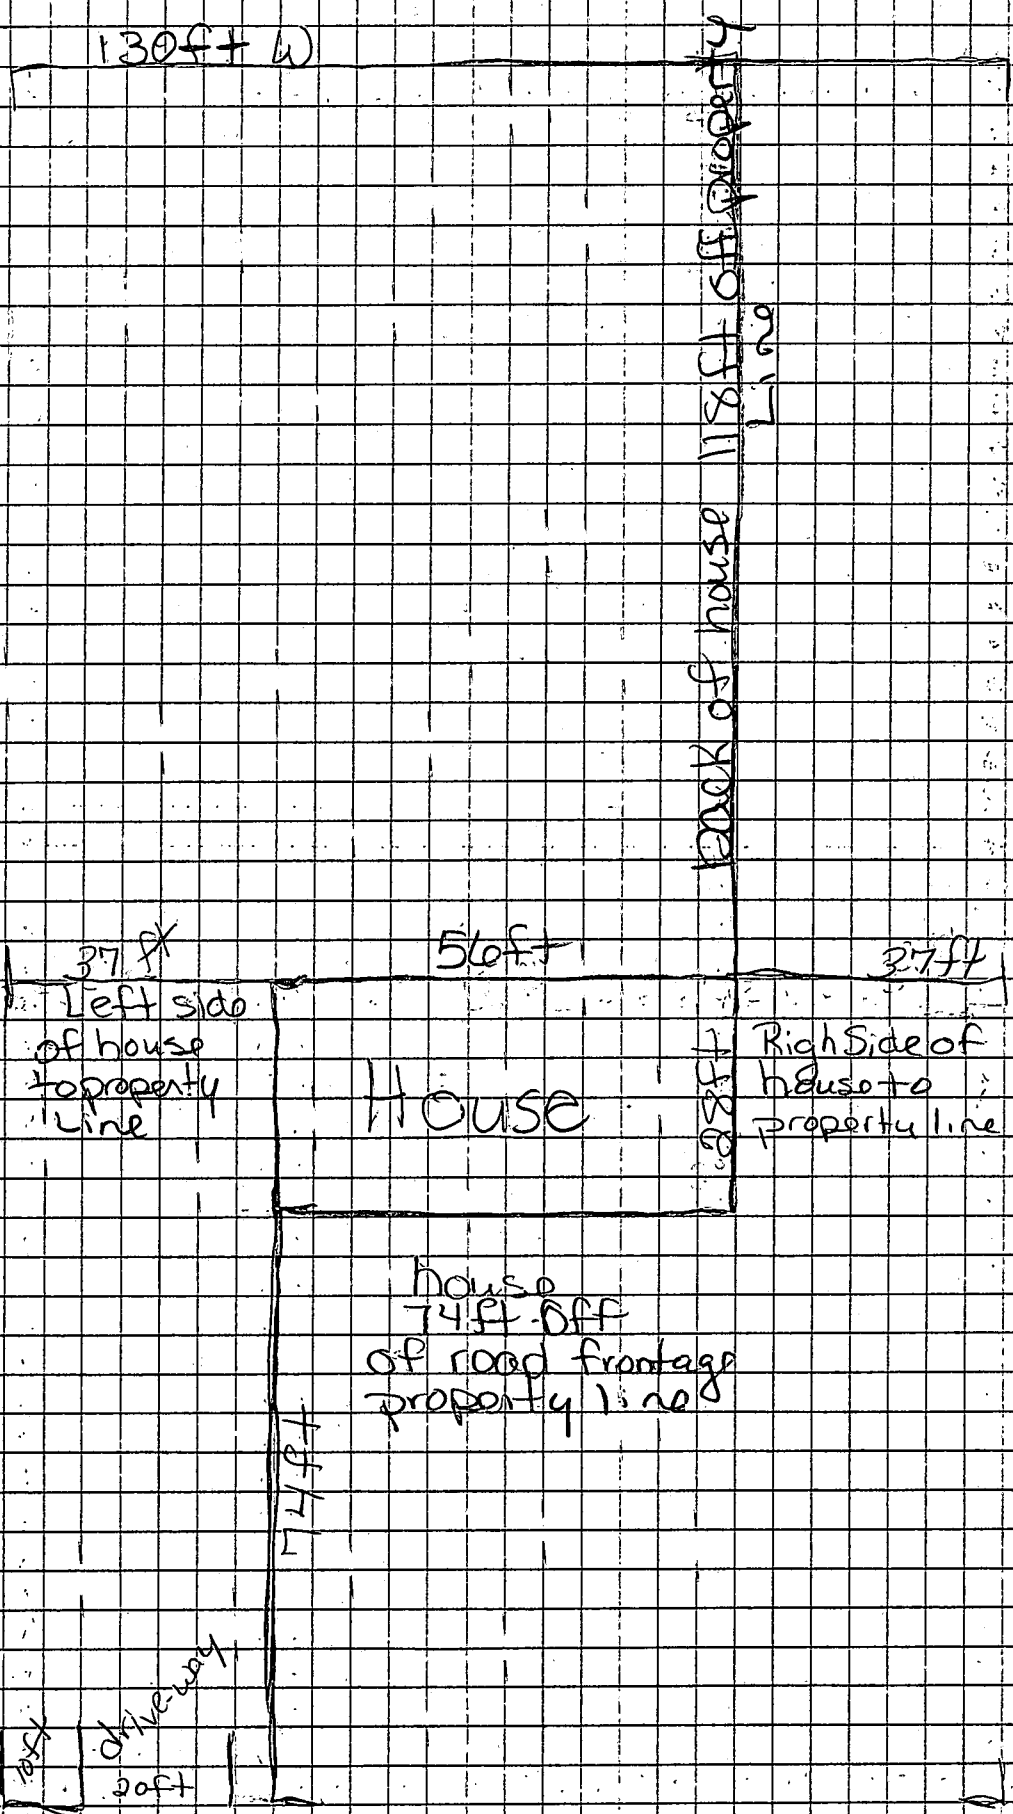

NOT TO SCALE

LANDSCAPING

The surface area on or around a ground absorption sewage treatment and disposal system shall be landscaped to provide adequate drainage. The soil cover over the nitrification field shall be to a depth of at least six inches. The finished grade over the nitrification field shall be landscaped to prevent the ponding of surface water and runoff of surface water shall be diverted away from the nitrification field. Soil cover above the original grade shall be placed at a uniform depth over the entire nitrification field, except as required to prevent the ponding of surface water, and shall extend laterally five feet beyond the nitrification trench. The soil cover shall be placed over a nitrification field only after proper preparation of the original ground surface.

***The system shall be installed according to the "Laws and Rules for Sewage Treatment and Disposal Systems" or as amended.
